

Video Wall Systems for Transportation Management Centers

REAL-TIME SITUATIONAL AWARENESS

With the continual growth of traffic density, demands on traffic management systems are increasing exponentially with time. Transportation management centers and traffic control rooms must now manage heavy volumes of data and leverage agile communication systems in order to increase road safety, improve traffic flow, and rapidly respond to incidents.

Haivision MCS's intelligent visualization solutions, including both hardware and software, allow teams to aggregate and manage massive amounts of information on a central collaborative visualization canvas. Live video feeds and content from traffic management applications can be dynamically arranged and analyzed in real-time for collaborative situational awareness and agile incident response. Haivision's fluid platform also enables teams to instantly extend their workflow across the network to involve law enforcement, [emergency operations centers](#), and other external stakeholders.

BENEFITS OF OUR COMPREHENSIVE SOLUTION

- Dynamic situational awareness
- Ultimate collaborative canvas
- Reliable, resilient system
- Intuitive operator experience
- Control room design
- 24/7/365 [support](#)

DYNAMIC SITUATIONAL AWARENESS & INCIDENT RESPONSE

The [Alpha FX video wall controller](#) empowers your team to create the ultimate transportation management dashboard. Content is routed through the controller from virtually any source or workstation on the [Command 360 platform](#) and can be placed anywhere on the video wall. Operators can dynamically arrange this content for full situational awareness and real-time emergency response, and agile incident response.

THE ULTIMATE COLLABORATIVE CANVAS

Haivision's CineView III [LCD video walls](#) provide the ultimate collaborative operating platform for transportation management. The CineView's expansive visual canvas delivers a crisp, crystal clear image at beyond ultra-HD resolutions. Haivision also offers CineLuxe [LED video walls](#) for a completely seamless solution.

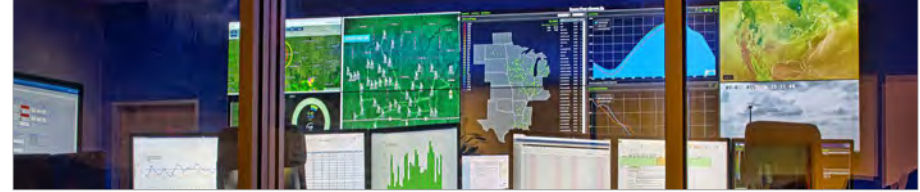

HAIVISION IS TRUSTED BY ORGANIZATIONS WORLDWIDE

GSA Schedule GS-35F-0537U

A RELIABLE, RESILIENT SYSTEM

Visualization systems in TMCs must be reliable, resilient, and support 24/7/365 operation even if an individual system component becomes compromised. Haivision's visualization systems provide ultra-high resilience and reliability.

CONTROL ROOM DESIGN & SPACE PLANNING SOLUTIONS

To maintain operator vigilance and minimize fatigue, transportation management teams must implement solutions that provide comfort over long hours. In addition to offering a comprehensive video wall solution, we also offer complete control room design for your transportation management center or traffic control room.

AN INTUITIVE OPERATOR EXPERIENCE

Command 360 software provides operators with complete control over the visualization system. Command 360 is designed to provide a robust, yet intuitive user experience with natural, easy-to-learn functionality. Through Command 360, operators interact fluidly with content on the video wall to achieve a multidimensional, yet focused view of transportation systems.
